# Per-tier fixed-correction effects

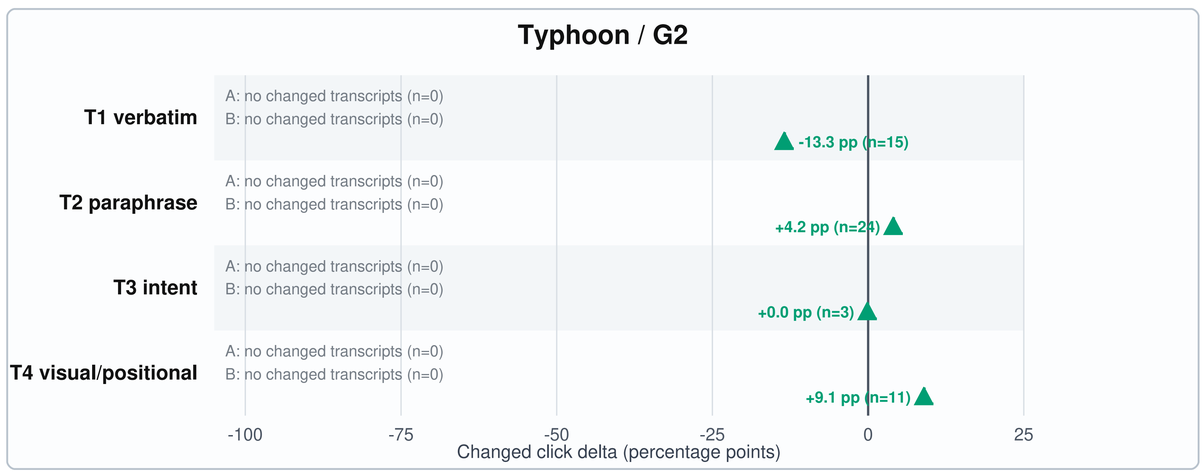

Changed-transcript effects are separated by ASR and grounding model

## A. Changed-transcript click delta

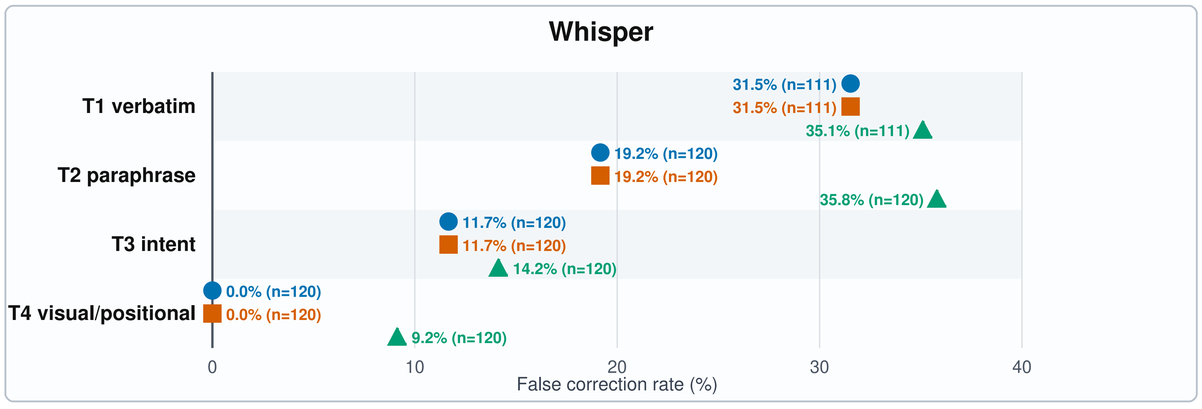

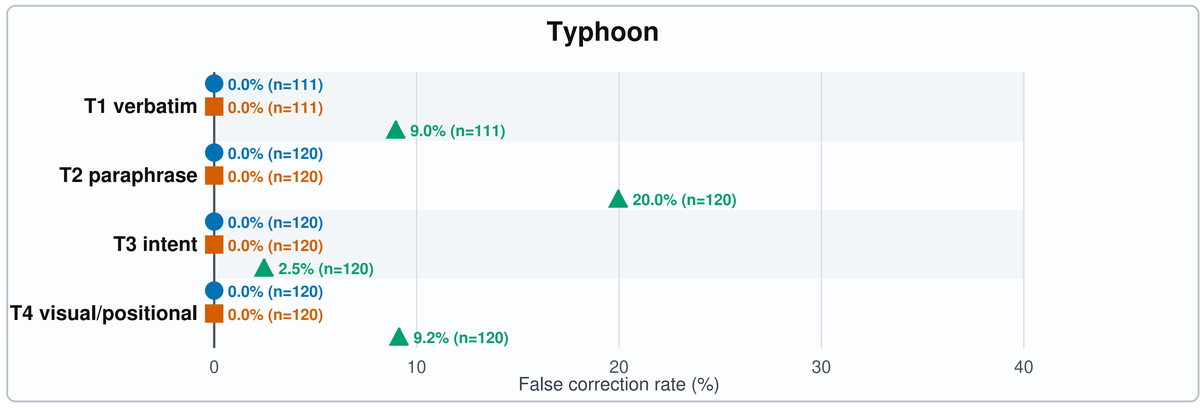

## B. False correction rate

Transcript-level metric shared by G1 and G2

**Methods:** A: no screen cleanup  B: screen string match  C: full screen aware alias

Exact values and denominators are printed beside every point; negative effects are not clipped.

Pooled deltas are omitted here because independent grounding reruns confound them; see Table 4.
